

# COLD LOVE, *Hot* SPOTS

**T**here is nothing that is without an origin. Something must have the first of its kind after which others can be replicated. The art, as we know, has no duplicate, though so many creativities have taken place within it but not still strong enough to change the originality of the art. Life evolved from somewhere and it has continued to evolve but nothing still has been able to change the origin of life. There is no duplicate to it.

Purpose can be described as an instrument of measuring the beginning and the end of life. Everything on the earth is therefore a purpose from the time of creation. There are things that cannot be changed from their original form but can, to a small or great extent, be faked meaning to make something look like another thing. The fake of anything can only make a victim of those who do not know what the original looks like or who have not taken enough time to identify some parts of the original that cannot be duplicated. The purpose behind the creation of the art should be far from being for trouble. Man understandably was made to live and enjoy life but on the condition of how strong or able it is to manage troubles.

Is trouble God-made? The answer will certainly be “no.” With what the answer turns out to be, trouble therefore is non-existent in reality. Its origin therefore can be traced to man’s creative forces, which meets with the world’s reactionary forces, which are not visible or tangible.

We, as humans, are born equal by reason of the same birth experience but in reality, some are more equal than the others. The more of the earth we decide to occupy, the more creative forces will release or engage and in return, we should expect to contend with an equal

amount of resistance from the reactionary forces. Man is endowed with intelligence which can be applied through the use of the five senses. Technology has evolved and continues to advance at a very high speed, which takes a toll on the preparedness and alertness of man to his new environment. We have made machines of war but none was made for peace, and as a man thinks in his heart, so is he.

The mindset developed by man as a result of technological advancement is that of offense, and this has been translated into the acquisition of nuclear weapons all in the name of protecting the world, but protecting the world at the expense of the earth is creating more troubles than man can handle. Where there is always a will, there is always a way. The world can be peaceful only on one condition, and that condition is an unconditional love.

All the agencies and organizations of the world, especially the United Nations, have as one of their main objectives the sharing of love among the member nations thereby creating in their minds a reason for coming together under the same umbrella, but unfortunately this meal of hope has always been served on a platter of hopelessness. The meal of hope must be served on a platter of love. Every other thing you can think of is lining up behind love. Love is the first and the last, the beginning and the end, and with it in active use, prevention and ending of conflicts in the world becomes a cheap possibility. Where love waxes cold, the emergence of hot spots becomes inevitable.
